

How to use a Generic USB 2.0 10/100M Ethernet Adaptor RD9700 on Mac OS 10.11 El Capitan

Step 1

- Reboot.
- As soon as the screen goes black, hold down "Command" and "R" until you see a black screen with an Apple logo and a white progress bar.
- Let go, and wait for your computer to boot into recovery mode.

Step 2

- From the menubar, select "Utilities" and then "Terminal".
- In Terminal, type *csrutil disable* and then hit return.
- From the menubar, select "", then "Restart"

Step 3

- Once you're booted back up, download and install the drivers
- <https://www.gadgets4geeks.com.au/WebRoot/Master/Shops/gadgets4geeks/MediaGallery/usb-to-ethernet-adapter-drivers.zip>
- Reboot.

Step 4

- Open Terminal (/Applications/Utilities) and type *sudo kextload /System/Library/Extensions/USBDCEthernet.kext*
- Reboot.

Step 5

- Plug in your USB Adapter, with a live ethernet cable.
- Open System Preferences, and go to the Network Pane.
- Hit the + button in the bottom right, select the "USB 2.0 10/100M Ethernet Adapter", and hit add.

You're all set!

Your adapter works!
