

## Operation

1. Connect Bluetooth Adapter to 30-Pin connector of audio player.
2. Wait for Blue LED on Bluetooth Adapter to start flashing.
3. Make sure Bluetooth is enabled on audio host device and is within a 10 metre range.
4. Select I-WAVE in Bluetooth devices list to pair.
5. Enter PIN 0000 (if required).
6. After successful pairing, the LED on adapter stops flashing and remains Blue.
7. The audio host device is now ready to stream audio.

## Compatibility

The Audio Adapter supports most audio dock / sound system / car audio player models with Apple 30-Pin connector (for audio signal input).

## Troubleshooting

Issue	Cause
I can't hear audio	Check volume level on both the audio host device (e.g. your paired phone) and the 30-Pin audio player.
I still can't hear any audio	Locate the make/model of the 30-Pin audio player and then check with the manufacturer if the 30-Pin connector supports use with Bluetooth Audio Receivers.

## Support Notes

### IMPORTANT!

*Please check 30-Pin connector on audio player supports use with 3rd party Bluetooth Audio Adapters.*

*The 30-Pin audio player MUST connect to an internal DAC hardware chipset (digital-to-analogue converter) for successful audio signal pass-through transmission.*

*Manufacturers may publish adapter compatibility and DAC chipset information on their website support pages.*
